

Automation Rule Registry: Sample

Representative documentation of the Jira and JSM automation rule set

Atlassian Platform Governance | 2021–2026

About This Registry

This registry documents automation rules running in the Atlassian Cloud environment. Each entry captures what the rule does, when it runs, which projects it affects, and who is responsible for it. The purpose is to make the automation layer auditable and maintainable, not just functional.

This is a representative sample of the rule set as of Q4 2025. The full environment contained 100+ active rules across Jira Software and Jira Service Management projects.

How to Read This Registry

Column	What It Means
Rule ID	Unique identifier used to reference the rule in change requests and troubleshooting notes
Rule Name	Plain-language name matching the rule name in the Jira Automation admin panel
Scope	Whether the rule runs globally (all projects), at the project level, or across a defined set of projects
Trigger	What initiates the rule: a scheduled time, an issue event, or a field change
What It Does	Plain-language description of the rule's action(s)
Affected Projects	Which Jira projects or service desks the rule touches
Owner	The team or individual responsible for the rule's business logic (not the Jira admin)
Last Reviewed	Date the rule was last confirmed as functioning and still needed

Rule Registry: Service Desk Automation

Rule ID	Rule Name	Scope	Trigger	What It Does	Affected Projects	Owner	Last Reviewed
AUT-001	Auto-assign incoming requests by type	Project	Issue created	Assigns new service requests to the correct agent queue based on request type. Removes unassigned status immediately on submission.	All JSM service desks	IT Admin	Nov 2025
AUT-002	SLA breach warning notification	Project	Scheduled (every 30 min)	Checks all open requests approaching SLA breach. Sends Slack notification to assigned agent and project lead 1 hour before breach.	All JSM service desks	IT Admin	Nov 2025
AUT-003	Auto-resolve stale requests	Project	Scheduled (daily)	Flags requests that have been in 'Waiting for Customer' status for 5+ business days. Sends reminder to customer. If no response in 3 more days, moves to Resolved with a closing comment.	All JSM service desks	IT Admin	Oct 2025
AUT-004	Escalate priority on reopen	Project	Status changed to Reopened	When a resolved ticket is reopened by the customer, automatically raises priority to High and reassigns to the original agent. Notifies project lead.	All JSM service desks	IT Admin	Sep 2025
AUT-005	Link parent ticket on intake submission	Project	Issue created in intake desk	When a request is submitted through the central intake service desk, creates linked child tickets in the appropriate department project(s) based on request type and auto-assigns them.	IT Intake, all dept projects	IT Admin	Dec 2025
AUT-006	Onboarding checklist generation	Project	Issue created (type: New Employee)	Triggered when HR submits a new employee request. Creates a set of sub-tasks across IT,	HR Service Desk, IT Projects	HR / IT Admin	Nov 2025

Rule ID	Rule Name	Scope	Trigger	What It Does	Affected Projects	Owner	Last Reviewed
				Facilities, and HR Jira projects covering all onboarding steps, with due dates offset from the start date.			

Rule Registry: Jira Software Automation

Rule ID	Rule Name	Scope	Trigger	What It Does	Affected Projects	Owner	Last Reviewed
AUT-010	SEO weekly task generation	Project	Scheduled (Monday 6:00 AM)	Generates the full weekly SEO task set automatically: creates all recurring tasks with correct assignees, due dates calculated from trigger date, and linked parent epic. Eliminates manual weekly setup.	SEO Project	SEO Team Lead	Dec 2025
AUT-011	Auto-transition on all subtasks complete	Project	Issue updated	When all sub-tasks on a parent issue move to Done, transitions the parent issue to In Review automatically. Notifies the assignee.	Engineering, Product	Engineering Lead	Oct 2025
AUT-012	Blocked issue daily digest	Global	Scheduled (daily 8:00 AM)	Queries all issues in Blocked status across active projects. Sends a daily summary to project leads listing their team's blocked items and the blocker linked issue.	All active projects	IT Admin	Nov 2025
AUT-013	Sprint close: move incomplete issues	Project	Sprint completed	When a sprint closes, moves all incomplete issues to the next sprint automatically. Adds a comment noting the issue was carried over and from which sprint.	All sprint-based projects	IT Admin	Sep 2025

Rule ID	Rule Name	Scope	Trigger	What It Does	Affected Projects	Owner	Last Reviewed
AUT-014	Release status rollup	Project	Scheduled (Friday 4:00 PM)	Queries all issues tagged to the active release version. Builds a summary comment on the release epic: count by status, list of open blockers, and percentage complete. Used as input for the weekly leadership report.	Product, Engineering	Product Lead	Dec 2025
AUT-015	Stale issue flag	Global	Scheduled (weekly)	Flags issues that have had no activity for 30+ days and are not in Done or Closed status. Adds a 'stale' label and notifies the assignee to update or close.	All active projects	IT Admin	Oct 2025

Rule Registry: Confluence & Cross-Platform

Rule ID	Rule Name	Scope	Trigger	What It Does	Affected Projects	Owner	Last Reviewed
AUT-020	JSM-to-Confluence knowledge base suggestion	Project	Issue resolved	When a JSM ticket is resolved and marked as a new issue type (not a duplicate), triggers a prompt to the agent to create a knowledge base article in the linked Confluence space. Pre-populates the article template with the ticket summary.	All JSM service desks	IT Admin	Nov 2025
AUT-021	Project health label auto-update	Global	Scheduled (Monday 7:00 AM)	Evaluates each active project's open issue count, overdue count, and last activity date. Applies a health label (On Track / At Risk / Stalled) to the project. Used in executive dashboard filters.	All active projects	IT Admin	Dec 2025

Change and Review Process

Any request to create, modify, or disable an automation rule is submitted through the IT service desk. Ad hoc changes to automation rules are not made in response to verbal or chat requests.

The review cycle for automation rules is quarterly. During each review, the Jira administrator confirms that each rule is still firing correctly and that the business need it was built for is still valid. Rules that are no longer needed are disabled (not deleted) and logged with the disablement date and reason.
